

THORN

North Star Lighting

Contrast Spectra

Adding dynamic colour to floodlighting

Contrast Spectra C1

Ideal for illuminating facades and structures up to 9m high

Colour Change System: Rotary Dichroic Disc

A rotating disc containing 8 different dichroic filters. The disc rotates alternately clockwise then anti-clockwise through the following colours:

- 1. Yellow
- 2. Blue
- 3. Red
- 4. Green
- 5. Orange
- 6. Cyan
- 7. Magenta
- 8. White

(This is the order in which the colours are exposed when the disc rotates in a clockwise direction)

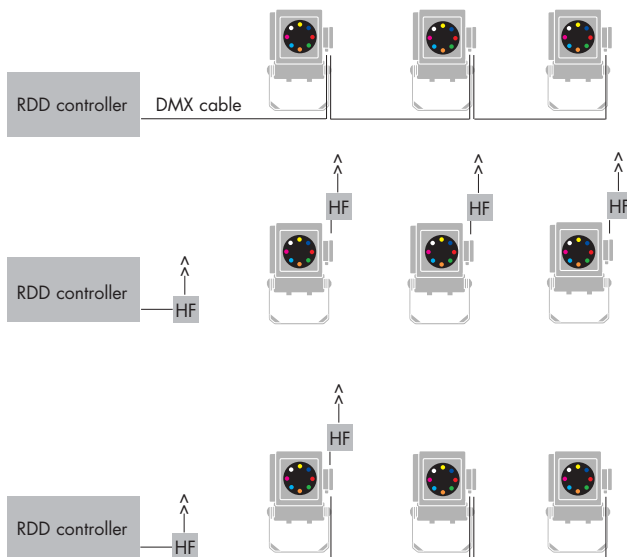

If a particular colour, or number of colours, is not required, the relevant dichroic filter can be quickly by-passed through simple programming. These colours may easily be 're-instated' at a later date if the installation requirements change.

RDD Programmer for Contrast Spectra C1

This is a very simple programming unit located within an IP65 rated aluminium housing, and is designed to operate rotary dichroic disc systems. Programming is effected by the manipulation of a set of dip-switches, each corresponding either to an individual colour, colour change time or exposure time. For spectrasoft software and combinations with C2 options see page 6.

Program Transmission Options

Programming Options

By using remote programmers (or software), programming can be performed in easily accessible areas. Access to the projectors themselves is not necessary, providing they have been correctly addressed during installation.

Option	With RDD Programmer	With Spectrasoft
Change Speeds	2 Options	Unlimited No. of Options
	1 sec / 4 sec	Unlimited No. of Timings
Exposure Times	4 Options	Unlimited No. of Options
	5 / 10 / 20 / 40 secs	Unlimited No. of Timings
	No. of addresses	1

For further information see page 6.

Lamps

 150W CDM-SA/T ceramic metal halide, cap: G12 6000 hours, 4200K, 12,900 lumens

Materials/Finish

Body and side mounted addressing box: die cast aluminium, grey powder coat finish.

Lamp holder cover: aluminium, grey powder coat finish.

Reflector: specular aluminium

Installation/Mounting

Floodlight is fully adjustable on a short stirrup. Aiming simplified by indicator on stirrup, locked via central 8mm Allen screw. Easy access to lamp via two Allen screws. Lamp replacement possible without removing attachments. Supplied complete with control gear. Control gear compartment, with rear access panel, fixed below body. Entry via two Allen screws. Cable gland for 7.5-13mm² cable.

Additional knock-out provided for through wiring.

Address box equipped with 2 No. cable entry glands for DMX NIP cable loop-in loop-out facility

Standards

Designed and manufactured to comply with EN 60598.

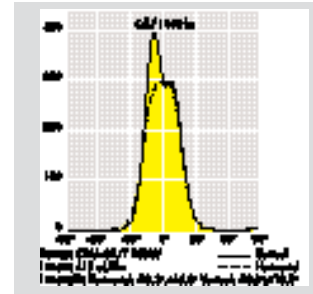

Electrical Class I

 IP65 

IK08 (5 joules) shock resistant

Specification

To specify state:
150W metal halide floodlight with integral control gear, integral Rotary Dichroic Disc colour change system with 8 dichroic colour filters and integral projector addressing system. Die cast aluminium body, grey powder coat finish. Toughened front glass. Sealed enclosure IP65 and IK08 (6 joules) shock resistant. Stirrup mounted. As Thorn Contrast Spectra C1

Contrast Spectra C2

This floodlight is suitable for illuminating facades and structures up to 12m high

Colour Change System: CYM dichroic technology

The CYM system comprises 3 dichroic filters (Cyan, Yellow & Magenta). These filters combine and interplay to create any colour within the spectrum. 62 colours are possible when using the dedicated programmer or an infinite number when using the software package

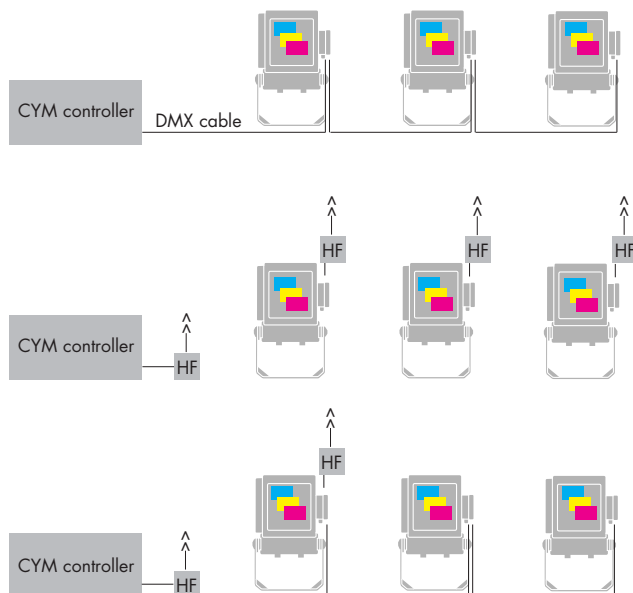

CYM Programmer for Contrast Spectra C2

The number of 'scene' possibilities available to users of CYM technology is virtually infinite. However, the CYM programmer has been developed to provide ready-made programme solutions for a wide variety of scene options, thus simplifying the programming of an advanced system.

Programming is effected by push buttons and an LED display to monitor the inputs. The unit is located in an IP65 rated aluminium housing. For spectrasoft software and combinations with C1 options see page 6.

Installation/Maintenance

Programming

Terminology

Accessories

1 Control gear access

& The control gear compartment is located separately from the optical part of the floodlight. Access to the control gear is via the rear door, using two Allen key screws. A waterproof gasket around the door ensures IP65 protection.

3 There is a knock-out for the & installation of a second cable 4 entry if through wiring is required. The second gland is supplied as standard with each floodlight.

5 Accessory mounting

All floodlight attachments are supplied with a mounting frame ready to install, complete with the required two or four nickel plated brass screws arranged symmetrically on the face of the

frame. These screws allow accessories to be mounted together on top of each other.

6 Aiming

After aiming the floodlight using the stirrup's polished aluminium graduated scale, the position can be set by securing the aiming lock. The memorisation of the position is assured by the angle stop. This system ensures that the floodlight does not have to be re-aimed after maintenance.

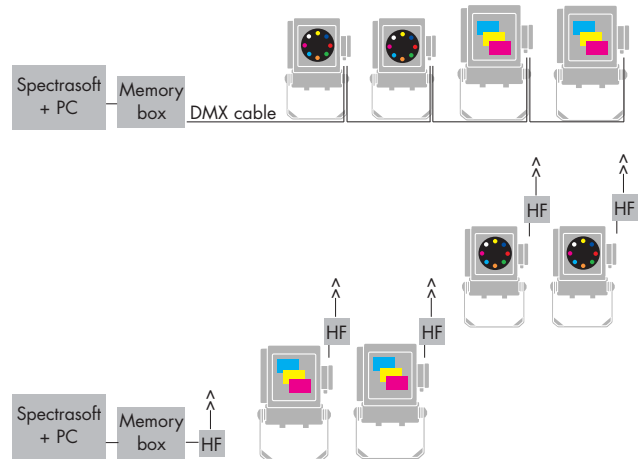

Access to lamp and internal programmer

Access to the lamp is made by opening the front glass using the two Allen screws on the top of the floodlight. The design allows the lamp to be replaced and the programmer to be set up without removing the accessories.

Programming

Spectrasoft for Contrast Spectra C1 and C2

Spectrasoft is capable of controlling both the RDD and CYM colour change systems (simultaneously if required) and has been designed to exploit the maximum potential of the more sophisticated CYM technology. It is the ideal tool for programming both complex and simple lighting effects, and is easy to programme. Once the programme data has been input, it is downloaded to a Programme Memory Box which stores and transmits the data to the projectors. The computer is no longer required for the operation of the colour change system, although it will be required for any programme changes.

Programme Transmission

The input data is sent to the Electronic Address Cards of the projectors by either DMX NIP cable or DMX High Frequency transmission.

Cable Transmission

The cables run from the dedicated programmer to the address box of the first projector in the installation. The DMX cable then loops out to the address box of the second projector.

High Frequency Transmission

This is particularly useful when replacing an existing projector with Spectra, as no additional (and expensive) underground cabling is required.

The programming unit is linked by DMX cable to a High Frequency Emitter located next to the programming unit. The emitter then sends the programme commands by High Frequency to an IP65 rated High Frequency Receiver located next to the relevant projector, which in turn sends the commands to the Electronic Address Card of the projector by DMX cable.

Programming Option

Programming Unit	Programme memory box	Programme transmission system	Suitable type of Projector	No. of colours available	No. of possible exposure	No. of change times available
RDD	No	DMX Cable DMX HF	Spectra C1	8	4	2
CYM	No	DMX Cable DMX HF	Spectra C2	62	20	20
Spectrasoft	Yes	DMX Cable DMX HF	Spectra C1 and/or C2	C2: Infinite C1: 8	Infinite	Infinite

Transmission Factors

Colour	Transmission Coefficient
White	1
Blue	0.03
Yellow	0.86
Red	0.14
Green	0.13
Orange	0.50
Cyan	0.20
Magenta	0.11

Some Terminology

Exposure Time

The length of time that an individual colour is displayed

Colour Change Time

The length of time taken to change from one colour display to another

Scene

A 'scene' comprises

- A Colour
- A Colour Change Time
- An Exposure Time

Programming

The input of data to control the content and sequence of scenes

Programme Transmission

The transmission of the programme data to the projectors within the installation

Address

Each projector needs an address so that the programmers know where to transmit the scene data to. The address of a projector is controlled by the Electronic Address Card (EAC) which receives the commands and in turn sends the messages to the colour filter system. The EAC is located within an aluminium housing attached to the side of the projector.

Projectors which share an address will receive all the same commands from the programmer and will therefore run the same sequence and content of scenes simultaneously. In such a case the entire installation will change colour, and display the same colour, as one.

In certain instances, projectors (or groups of projectors) within the same installation and programmed from a single programming unit, can be given individual addresses, thus receiving unique scene commands and allowing many different colours and dramatic effects to be displayed simultaneously.

Accessories

Refractor lens No.2

Refractor Lens No.3

Barn doors

Fixed louvres

Adjustable louvres

Wire guard

Visor

Contrast

Dedicated to outdoor architectural lighting. 20W to 400W lamp options in one family

Contrast R and Contrast C

- Body in die cast aluminium
- Grey powder coated finish, RAL colour versions available on request
- Discharge floodlights available in 3 sizes
- A wide selection of front glasses and reflectors which can be rotated to give alignment of the beam profile to suit the application
- Variety of attachments, including colour filters, barn doors and wire guard
- Stirrup mount allows base support for suspension
- IP65

Contrast C Wide Angle

- Based on Contrast C size 2
- Optical system specially adapted to give extra wide angle beam for building facade lighting

Pinspot and Mini Pinspot

- The smallest in the Contrast range
- Available in 2 sizes, Pinspot 140mmø front face, Mini Pinspot 100mmø front face
- Mains voltage discrete floodlights for use with Ceramic Metal Halide and Tungsten halogen lamps all within bodies sealed to IP65
- These low power floodlights with small fixings can be hidden in corners of hedges making them particularly suited to heritage or listed buildings, highlighting architectural details, sculptures, foliage and signage

For full details of the Contrast and Contrast Pinspot ranges, please refer to our catalogue.
